

BASIC APPLICATION

for babies & kids

Gentle Reminder:

Before you start using a new product, you should always do a patch test to avoid the risk of irritation or an allergic reaction.

Remember that everyone's skin is unique: what works for one person may cause another to have an adverse reaction.

How to: SKIN PATCH TEST

1

Wash your forearm with mild, unscented soap, then pat the area dry.

2

Apply a few drops of the product to a small patch of skin on your inner elbow (forearm).

3

Cover the area with a bandage, then wait at least 24 hours, preferably 72 hours, keeping the area dry.

If you notice any rash or irritation (itchiness, redness, hives, bumps, spots, swelling or soreness) during the 24 hours, remove the bandage and apply olive oil or coconut oil to the affected area as often as needed, to reduce the effects. Please seek advice from a doctor if condition worsens.
